

EXECUTIVE PRESENTATION DECK

Inaya Network *Strategic Business Model* & Financial Architecture

CONFIDENTIAL · PREPARED FOR INSTITUTIONAL REVIEW

INAYA NETWORK — DEPIN INFRASTRUCTURE & CUSTODY PROTOCOL

• Updated Corporate Subscription Tiers

Our high-margin B2B subscription infrastructure layer offers enterprise gateway access and institutional Service Level Agreements (SLAs). These subscription fees are separate from the baseline processing rate of **0.1 USDT + 0.1 INAYA per GB**.

TIER	DESCRIPTION	PRICING	INCLUSIONS
Scale Matrix	Early-stage dApps & audited protocols	\$999 / month	Up to 15M API requests; client-side GCM cryptographic pipelines
Established Swarm	Mid-tier DeFi & active Web3 systems	\$5,000-\$10,000 / month	Up to 150M API loops; priority distributed routing
Institutional Node	Enterprise frameworks & Tier-1 ecosystems	\$15,000-\$35,000 / month	Dedicated RPC endpoints; zero-latency SLAs; unlimited allocations

Subscription revenue functions as a recurring, high-margin overlay atop the network's baseline usage-based pricing — reinforcing predictable, institutional-grade cash flow.

Financial Matrix Breakdown

Our DePIN infrastructure boasts a projected **50% EBITDA margin**, built on a lean cost base and disciplined capital allocation.

TARGET EBITDA MARGIN

50%

• Hypothetical Case Scenario

A conservative early-stage scenario assuming **5 Institutional clients** and **10 Established clients**.

A • ANNUAL GROSS REVENUE

- Institutional: $5 \times \$20,000/\text{mo} \times 12 = \$1,200,000$
- Established: $10 \times \$5,000/\text{mo} \times 12 = \$600,000$

Total Gross Revenue: \$1,800,000

B • ANNUAL OPERATIONAL OUTFLOWS

- Ecosystem Grants (20%): \$360,000
- COGS (15%): \$270,000
- R&D (10%): \$180,000
- Admin / Legal (5%): \$90,000

Total Expenses: \$900,000

C • FINAL NET YIELD — EBITDA

\$900,000 (50% margin achieved)

• The Inaya Foundation Scholarship & Grant Project

Our commitment to community growth is reflected in a dedicated, non-dilutive Scholarship and Grant Project.

ALLOCATION

20% of revenue, equating to \$360,000 annually

NATURE

A non-dilutive fund dedicated to community expansion

MICRO-GRANTS

Awarded in amounts ranging from \$2,500 to \$10,000 per recipient

TARGET RECIPIENTS

Young developers, cryptography students, and open-source builders

MANDATE

To foster the development of applications leveraging the Inaya Custody SDK

• Why VCs & Institutional Reviewers Will Value This Model

01 Immune to Utility Commoditization

The dual-asset model (0.1 USDT + 0.1 INAYA per GB) ensures revenue predictability alongside programmatic token demand.

02 Exceptional Financial Runway

A projected 50% EBITDA margin provides an institutional-grade financial cushion and operational flexibility.

03 Self-Sustaining Growth Flywheel

The strategic allocation of 20% of revenue toward developer scholarships fuels dApp development, which in turn drives network growth and adoption.

04 Complementary Founding Team

Deep technical and commercial expertise spans cryptographic infrastructure and ecosystem-scaling operations.

CTO**Talha Waqas**

Web3 full-stack engineer with a focus on cryptographic layers.

CMO**Fibha Urooj**

Drives commercial operations and ecosystem scaling initiatives.

• Closing Summary

This presentation outlines the strategic business model and financial architecture of the Inaya Network: a tiered subscription structure, a disciplined financial matrix with a significant EBITDA margin, a conservative case scenario demonstrating profitability, and a lasting commitment to community growth through the Foundation Scholarship.

Its resilience against utility commoditization, paired with a self-sustaining growth flywheel, positions Inaya Network as a compelling opportunity for venture capital and institutional reviewers.
